ICAMNOP – 2023

International Conference on Atomic, Molecular, Material, Nano and Optical Physics with Applications

December 20th - 22nd, 2023
https://www.icamnop.in/

Organized by:
Department of Applied Physics, Delhi Technological University
Delhi-110042, India
The International Conference on Atomic, Molecular, Material, Nano and Optical Physics with Applications (ICAMNOP 2023) will focus on developments in atomic, molecular, material, nano and optical physics which have proved to be powerful science supporting many other areas of science & technology, including industrial, information, energy, global Change, defense, health, space and transportation technology. The conference will involve experimental and theoretical studies of atoms, ions, molecules and nanostructures both at the fundamental level & on the application side using advanced technology. Using modern tools of high – field and ultra-fast physics, one no longer merely observes nature, but can reshape and redirect atoms, molecules, particles or radiation. This new drive towards harnessing quantum dynamics is enormously important to future developments in fundamentals physics and applied energy science. Third generation synchrotron sources offer new opportunities to study radiation – matter interactions. Optical techniques have also played a very important role in the creation, understanding and manipulation of atomic and molecular Bose-Einstein Condensates. Complete quantum mechanical description of such properties and interactions is required and therefore, the present conference aims at bringing together experimental and theoretical scientists working in various fields of “Atomic, Molecular, Material, Nano and Optical Physics”, to share and exchange new ideas. Topics of interest in the conference include: Atomic & molecular structure, Collision process, Clusters, Surfaces and exotic particles and Applications, Laser cooling, trapping and Bose – Einstein condensation, High precision and Ultracold phenomena, High harmonic generation and applications, Coherent optical phenomena, Ultrafast dynamics at the Femto- or Atto second scale, ion – include radiation damage in particular of biomolecules, atomic spectroscopy and molecular physics of antimatter, free electron laser, particle acceleration generated by high – power laser, Quantum optics and its application to Mesoscopic system, Other topics covered are: Spectroscopy of Solar and Stellar Plasma, The atomic universe: Spectra as Probes of Cool Gas. The rapidly growing field of nanophysics is also introduced as a separate conference topic, which include, nano- structures and photonics. In the last, a session will also be devoted to application of Atomic, Molecular, Material, Nano, and Optical Physics in Petroleum, Renewable energy, Environmental Science, Information Technology, Health and Education in Developing Countries.
